Cool Energy's ArcticStore Container type unit – is Ideal for chill or deep frozen storage applications providing a budget option from 1 week to long-term hire

Temperature Range

The temperature range of these units is -30 °C to +25 °C. Power requirements for the refrigeration system is 415v, 3 phase earth and neutral 32 amp motor rated power supply. The cooling system is specially designed unit giving economy of operation with maximum cooling efficiency.

Unit Build Quality

The range features stainless steel internal panels and a high strength chequer plate floor. Externally, the units have smooth aluminium, light grey side panels and a white roof giving good levels of heat reflection. The units are for outside use but can be located inside subject to site inspection.

Health and Safety

The units have flat floor allowing for easy cleaning limiting bacteria risks. The floor is a high strength chequer plate floor permitting the use of low mast forklift or wheeled pallet trolleys. The units feature a mantrap alarm and a mains isolator, the units have double doors for easy access with lock and internal safety release, door retainers, plastic strip curtains (at additional cost) and door heater tapes.

Instrumentation and Control

On/Off switch, temperature display, power on and defrost lights. Electronic data logger monitors cold store and return air temperature, (door opening - not on ArcticStore units), defrosts (high/low - not on ArcticStore units) and temperature alarms.

Transportation and Handling

A HIAB is used to position the unit on and off site.

Options and Service

A range of options are available including personnel and side doors, shelving, racking, multi-compartment partitions, elevation platform, ramps, dock seals, buffers and additional security bars. As standard with your rental agreement service and maintenance is included on a 24/7 basis, with regular scheduled services carried out on site.
