

## Cold Storage Breakdown in Birmingham

Cool Energy has successfully completed the installation of a 100kW cooling project at a food production and storage centre in the Midlands.

The customer, who is based in Sutton Coldfield and specialises in ready meals, required a 90kW temporary cooling package for a minimum 12 weeks, following the failure of a dx cooling system in their central storage facility.

Cool Energy was able to supply **2 off 50kW low noise fan coils** which supplied a -10°C water/glycol cooling ring main throughout the store

2 x 50kW low noise fan coils in situ

Commenting on the installation, **Cool Energy's Rental Director, Russell Wilson** (pictured above) explained, "Our client was really under pressure to keep their business operating throughout the disruption and we were able to work round this in tandem with their help.

I am happy that we engineered a solution and able to isolate their system and install our equipment safely.

We managed the delivery and installation over 24 hours and installed 2 independent cooling systems, which took a team of 2 local Cool Energy engineers to manage from our **Aston** operation."

Cool Energy, who also operate throughout Ireland and Europe, rent air and water-cooled chillers, air blast coolers, air handling units, fan coils, modular cold stores and air conditioners on a same or next day basis throughout the UK and Europe.

Installation can be provided where needed and flexible water hoses, pipework connections, heat exchangers, power cable and generators can be supplied, together with 24/7 maintenance throughout the project period.

Cool Energy can be contacted on **0800 840 4210** or via email on [info@coolenergy.co.uk](mailto:info@coolenergy.co.uk)
