

Hospital Maintenance Project

Cool Energy has successfully completed a temporary HVAC rental project for a hospital which required cooling throughout 4 floors for staff and patients.

The hospital, which is based near Harrogate, required a 650kW temporary cooling package for 20 weeks following the failure of a chiller evaporator in their central HVAC plant.

Fast Action from Cool Energy

Cool Energy was able to supply a turnkey package which supplied cooling air throughout the 4-storey building.

The customers building with chillers sited externally

Due to water and power distribution difficulties on site **Cool Energy** provided a scaffold tower to ensure that this was managed safely.

Commenting on the installation, **Cool Energy's Rental Director, Russell Wilson** explained, "We were called over a weekend and asked to visit site on the same day to find a solution to our customers problem on site. At this point they did not know when a replacement evaporator would be available. We were able to react quickly to their emergency requirements, as staff was due in the next day."

We managed the delivery and installation the following day.

We worked extremely hard throughout this project and it was very pleasing to receive good feedback from everyone involved."

Nationwide Support

Cool Energy also operate throughout Ireland and Europe, rent air and water-cooled chillers, air blast coolers, air handling units, fan coils and air conditioners throughout the UK and Europe.

They also install their equipment where needed and supply flexible water hoses, pipework connections, heat exchangers, power cable and generators.

Cool Energy rentals also include 24/7 maintenance throughout the project period.
