

Need a Mould Temp or Thermoregulator Fast?

Cool Energy is launching a new rental service to help customers in a breakdown emergency or if they need to trial a process prior to full production.

Mould Temp Hire Units

Mould temperature controllers are now available to hire. The units help heat or temperature control injection moulding machines and can provide thermoregulation to oil or water heating processes such as jacketed vessels, printing presses and chocolate production.

Units are also now replacing steam as a more economic closer-control heating medium.

Cool Energy, who's sister company Tricool Thermal manufacturers the units at its Southampton-based production facility, are offering a 3-96kW range of portable rental units ready for immediate hire.

Full range of Tricool Thermal units for Rent

Cool Energy's Rental Director, Russell Wilson (pictured left) explained, "We have been developing our range of rental mould temperature controllers for 12 months and have conducted 14 such trials with customers over this period, which have provided us with some excellent results."

Our customers are now able to choose from a range of 10 products offering oil heating up to 350oC, water heating to 160oC and a combination of both from one single unit.

The Cool Energy Mould Temp Range will help our customers to manage a breakdown to their incumbent kit by renting one of our units, which can be delivered next day to anywhere in the UK.

As an alternative, we can also offer rental units to help with trials for pharmaceutical or chemical companies, where they don't have to commit to capital plant until their NPD is complete and proven. We can rent a unit for as long as they need for very good rental rates.

The Mould Temp unit is now available to rent.

We now have a very good selection of stock at our Southampton base that can be shipped out next day in emergencies to help maintain production for customers in need of a rapid delivery service and this gives them a good option for dealing with breakdowns.

Tricool Thermal's product is British-made and has the benefit of 30 years experienced production and product control. All units are built within ISO9001 controls and CE marked."

Nationwide Support

Cool Energy, who also operates throughout Europe, rent air and water-cooled chillers, air blast coolers, air handling units, fan coils and air conditioners throughout the UK and Europe.

They also install their equipment where needed and supply flexible water hoses, pipework connections, heat exchangers, power cable and generators.

All Cool Energy rentals include 24/7 maintenance throughout the project period.

Cool Energy can be contacted on 0800 840 4210 or via email on info@coolenergy.co.uk
