

## Saturday Emergency Chiller Rental

Cool Energy has completed a weekend temporary cooling project with a Lincolnshire-based pasta producer.

### Customer Specifications

The customer, who is based near Spalding, required a 250kW temporary cooling package for 11 weeks following the failure of their chiller, which cooled their incoming mains water storage tank.

Cool Energy was able to supply 1 off 280kW low noise rental chiller, together with a super-silenced diesel generator to help manage the power.

### Out of hours installation

Commenting on the installation, **Cool Energy's Rental Director, Russell Wilson** explained, "We were called out-of-hours at 4.30pm on the Saturday and asked to visit site the same day to find a solution to our customers' problem on site.

The on-call **Cool Energy** sales engineer was able to quickly ascertain the most suitable cooling equipment to replace the kit on site, and the best economically for the customer.

We managed the delivery and installation during the following day, on the Sunday and everything was installed within a 3-hour period, along with a temporary power package and fuel management.

It was really pleasing to see that our on-call team received good feedback from everyone involved."
