

## Biscuit/Confectionery Cooling

### Project

A customer's production line was experiencing ambient-related problems due to a build-up of heat in their production and packaging areas.

The customer called Cool Energy because their production was affected with overheating product and a slow down in the product wrapping machinery.

Both area and products were affected by the high ambients and production was in danger of running to a halt. Product quality was of paramount importance for their client who needed their supplies the following day.

### Equipment Supplied

A 200kW chiller package – complete with 4 low noise fan coils, 150m x 2" flexible water hose.

### Cool Energy Solution

The Cool Energy rental engineer liaised with the customer and visited site within 4 hours to ensure that the correct connections, sufficient space and power was available.

The customer agreed to site a temporary range of chillers on their roof and then pipe flexible hoses through their roof to internally site fan coils. These were sited close to the areas of primary concern.

Cool Energy delivered a 200kW cooling to site on the same day and, along with 4 local engineers, installed the chiller packages.

Within 4 hours the customer was up and running and production could start.

The cooling package is currently being used and

maintaining a close control temperature range.
